

Lightweight PVC Coated Polyester Jacket

Easy Installation

Just press the snap buttons closed for a secure covering for any wire or cable bundle.

Snap-Grip® is a commercial-grade, flame-retardant, PVC-coated polyester fabric material that utilizes a unique nylon snap-button closure system.

Since no tooling is required for installation, Snap-Grip® is ideal for general cable management applications in office or industrial locations where multiple wires or cables penetrate cabinets, equipment housings, or internal wiring of appliances. The separation between the snaps allows for easy cable breakouts and transitions within a wire harness.

EMI Shield Option See "Snap-Grip® (AL)" on Page c27

Thermal Option See "Snap-Grip® (SAM-1000)" on Page c34

Thermal & EMI Versions Available

The snap-button design stays closed in high flexing applications
