

Z-Shield®

Wrap-Around EMI-Shielded Jacket

Outstanding Flexibility

Extremely useful in electronics applications where space may require thin and flexible shielding.

Z-Shield® is a wrap-around, EMI-shielded jacket made of fire-retardant polyurethane film, EMI-shielding cloth or foil, and an adhesive closure. This combination provides excellent electromagnetic shielding of wires and cables in applications that require outstanding flexibility, flame retardancy, and good dielectric strength. Extremely useful in electronics applications where space may require thin and flexible shielding, Z-Shield® can be configured to fit most round, flat, or rectangular cable configurations and is available with or without a ground wire installed.

Dual Layer Option Available
for Added Protection

98%

**Shielding
Coverage**

Features a flexible flame-retardant polyurethane jacket with an optional ground wire
